For acceptable style, format and layout please examine recent issues of the journal. No sentences, headings or surnames should be in capitals or small caps. Latin names of genera and species should be italicised.

The first mention of any organism must include the full scientific name with the author and the year of publication, but thereafter the author and date can be omitted and the generic name abbreviated.

Geographic and other names in languages where other than Latin characters are used (e. g. Armenian, Chinese, Georgian, Greek, Russian, Ukrainian etc.) should be given in the transliteration/transcription (not translation!) (and could be supplied by the original language spelling in brackets, where needed).

The authors should strictly follow requirements and recommendations of the current edition of the International Code of Zoological Nomenclature. Alternatively, the nomenclature used should follow a recent list or other suitable work and this should be cited. The materials used should be listed in following order: **type material**, if examined, with exact citation of labels in primary types (holotype, lectotype or syntypes); **non-type material**, organized by countries or provinces either alphabetically or geographically (from North to South, from West to East) ordered: **country**: province (optionally): locality, coordinates and altitude (where available), ecological data (hosts, feeding substrate, etc.), date (collector second name in brackets) (abbreviation of depository); for specimens with unrecognized localities, only a full original label can be cited, as follows, for example:

Names of collectors should be given without initials, unless different collectors with the same family name are known to exist (optionally). Abbreviations of the material depositories are to be explained in the Material chapter. The derivation of new names should be explained in a paragraph Etymology.

TABLES

Tables should each be typed on a separate page.

Large tables should be avoided. If numerous data are to be presented, an attempt should be made to divide them in two or more tables.

Tables should be numbered consecutively in Arabic numerals according their sequence in the text. All tables should be referred to in the text.

Each table should have a title which will make the meaning clear without reference to the text.

Column headings should be brief, but sufficiently explanatory. Units of measurements should be added after comma.

Vertical lines should not be used to separate columns. Extra space should be left between the columns instead.

Additional explanations essential for the understanding of the table should be given as footnotes at the bottom of the table.

ILLUSTRATIONS

All illustrations should be given in separate files, preferably in tiff or jpg format, not as MS Word file.

Files of illustrations should be numbered according to their sequence in the text. References should be made in the text to each figure. The suggested positions of figures should be indicated in the manuscript.

Figures must be drawn in black ink, labeled with stenciled or pre-printed lettering or numbering in Arabic numerals large enough to allow reduction.

Photographs must be of 300–600 dpi quality. Where several photographs are to form one plate, they should be mounted in one journal page size file (125 135 × 50 190 mm).

Figures should show the reference scale bars, where relevant.

We use a modified Harvard style for references.
